

## Corporate Overview

Power Software was established in 1993 to provide software development solutions. Our goal was to provide practical, affordable, easy to use development tools.

Initially the company provided supply and support of C/C++ development environments and components with a number of partners including Cygnus Solutions (now Redhat) and Takefive Software (now Wind River Systems).

From 1993 to 1997 Power Software supplied technology and support to many hundreds of projects to customers such as European Air Traffic Control, Hewlett Packard, JP Morgan and Nokia.

In 1997 Power Software released the first versions of the Krakatau Metrics, Source Code Measurement and Quality tools for C/C++ and Java. This first generation range of metrics tools gained immediate popularity and a large customer base was quickly established.

(A few customers can be seen on this page <http://www.powersoftware.com/customers/>)

The second generation of Krakatau Metrics tools were designed specifically to be scalable for very large source code projects and to allow the comparison of two projects for Krakatau Project Manager (PM).

Version 2.x of Krakatau Professional and Krakatau PM were released in Spring 2001 and immediately adopted by large projects at Tellabs, Ericsson, TRW and elsewhere.

Recently we released Essential Metrics (EM) a fully functional command line version of Krakatau Professional and Visualizeit!

Throughout the past 8 years Power Software has continued to support and supply leading companies with useful, affordable source code analysis technology. The company has wide experience in all areas of development, support, sales and marketing.

Power Software operates as a small, flexible team of software and commercial specialists. University educated, and in many cases with higher professional qualifications, all our employees and principles are experienced in supporting clients throughout Europe and North America.

Sales revenue has grown to over \$1million and the company operates profitably without debt from its headquarters in Aberdeen, Scotland.
